

true\_type

```
graph BT; A["google::protobuf::internal::is_integral< signed char >"] --> B["true_type"]
```

The diagram illustrates a relationship between two types. At the bottom, a gray box contains the text `google::protobuf::internal::is_integral< signed char >`. Two blue arrows originate from the top of this box and point upwards to a white box at the top containing the text `true_type`. This visualizes that `google::protobuf::internal::is_integral< signed char >` inherits from or is a specialization of `true_type`.
