

tinyxml2::MemPool

```
graph BT; A["tinyxml2::MemPoolT< SIZE >"] --> B["tinyxml2::MemPool"]
```

The diagram illustrates an inheritance relationship between two C++ classes. At the bottom is a box representing the base class, `tinyxml2::MemPoolT`, with a template parameter `< SIZE >`. At the top is a box representing the derived class, `tinyxml2::MemPool`. Two blue arrows originate from the top of the base class box and point upwards to the bottom of the derived class box, indicating that `MemPool` inherits from `MemPoolT`.
